

DEMIRSAN

The foundation of our company had laid as a lathe workshop by Mr. Bekir Demir, in Karabağlar, at 1972 that had continue to operate in this way for a long time. After that our General Manager Mr. Cihan Demir has taken over the flag at 2001 and took up business in iron-trade segment as Demirsan Metal, by turning a new page for our company.

In the early years, our company has carried on by supplying pipes and profiles to customers of hardware industry, then Demirsan Metal has moved to Torbalı/Pancar depot for investments and increase the variety of products in 2009. Our company focused on to the flat products without being limited with depot service. Therefore our company has took a decision for the machinization to form the flat plates. On the other hand due to the outgrow in area and desiring increase the capacity of our Pancar (Organise Industry Area) factory which has 8000m² was put in to use in 2014 with the purpose of providing faster and better service to our customers.

We offer the services of semi-finished products, which have various qualities and sizes, to the manufacturers of construction, agriculture, engine and automotive industry, respectively. In addition, drywall profile production lines have been activated for the construction industry.

Our company will continue to give service with growing day by day ; having self-improvement team ; doing researches by using our knowledge and experiences ; following closely the industry manufacturers by the keeping up the changing and developing world.

OUR PRODUCTS

1) TUBE

2) PROFILE

3) FLAT PRODUCTS

- DKP SHEET STEEL
- HRP SHEET STEEL
- BLACK SHEET STEEL
- GALVANIZED SHEET STEEL
- PLATE

4) ROLLED PRODUCTS

- SHEET IRON
- SQUARE IRON
- ANGLE TRIM IRON
- NPU-NPI IRON
- IPE
- HEB, HEA
- DRYWALL STUDS AND TRACKS

5) ROOF MATERIALS

- GALVANIZED DECK
- PAINTED DECK
- PANEL

6)

6) ACCESSORIES

- JOINT BRACKET
- AGRAFFE
- CLIPS
- HANGER ROD TYPE-O
- HANGER TYPE T

OUR SERVICES

We produce high quality and fit in with your requirements.

In our plant which is founded in Pancar Organise Industry Area that has 8000 m² area, we are ready to provide fast and quality service to you with our machines which can form the all of types of metals in various sizes and thicknesses. Besides extensive product range, all types of metals are treated that aimed of requirements by the PLASMA CUTTING, GUILLOTINE CUTTING, PRESS BRAKE , WELDED PRODUCTION AND ROLLFORM LINE.

You can make contact with us from the phone numbers that in the communication department. We do our best for you.

PLASMA CUTTING

We deliver all of your requirements that from 5mm to 300mm by cutting with Ajan CNC Plasma & Oxy cutting counter in our Torbalı plant. All of our cuttings are prepared by computer system and are cutted in fully automatical cutting machines, carefully.

Plasma Cutting is a process that continue to give energy to the material in gaseous state and at proper conditions. Plasma cutting leads to take place the workpiece to the plasma state by the passing of metal to the plasma state. Recently plasma cutting used in especially production industry; shipbuilding industry, automotive industry, pressurized cup production industry. Plasma cutting achieved by the thermal saw mainly.

GUILLOTINE CUTTING

It is a counter that used to cutting sheet materials in specialized sizes. We supply your needs which include thin or thick, narrow or wide by our machines that have extensive usage.

PRESS BRAKE

Press brakes are machines that are used in manufacturing of sheet productions. It bends the plate that programmed by the applying high hydraulics force which is controlled by the CNC counter. They are used to form the sheets which are in specific angles. Generally, they have monoblock and welded trunk that has, provided static and dynamic rigidity. It is suitable for the bending of thin and thick sheets. We achieve all of the bendings which are suitable to our machine capacities.

WELDED PRODUCTION

Welding works are achieved into the metal workpiece in our company by whom the experienced personnel are produce the products. Welding is a process that used to combine the materials with each other. The workpiece is melted which part will weld and packing material added to this part, then the junction is cold to be harden.

ROLLFORM LINE

We produce profiles of reinforcement profile tension machine; drywall profiles, drywall studs and tracks, greenhouse gutter profiles, in various types of u; c; z profiles, purlin profiles, shutter profiles, punched profiles, high cutting; opened profile production that have high quality, suitable for specialized customer requirements.
